

SM10 Seamachine on **stand C312G**.

With a range of equipment from winding machines designed as turret winders or multi-station winders, cutting devices with scissors or blades to handling solutions for reels or plates.

TNT Maschinenbau's scope of services also comprises the construction of the switchboard plants, programming,

commissioning in-house or in the customer's works and of course after sales service. Visit TNT on **stand 2M03**.

TS Converting and **Deacro** will launch a range of slitter rewinders and core cutters at the show. They will be displaying a fully automatic Deacro T610, turret winder, and CW1000 which are both equipped with automatic cut and transfer, tape down, finished reel ejection, core loading, roll weighing, wrapping and palletising system. A reversible, high speed, R30 rewriter/salvage machine will be running to demonstrate its capabilities. All new machines have been engineered and comply with European and CE standards with worldwide support bases in Canada and the UK.

The new Elite Cameron, CC100A (above next page), semi automatic core cutter will be running on the stand. The
